SUMMARY

OVERVIEW

Just like most babies, Super Baby Ethereum was created and conceived by accident, but it is clear we were meant to be! Baby Super Ethereum is a token that rewards its HODLERS with ETHEREUM Coin through the volume of trading that occurs with the token. Super Baby Ethereum is essentially a fork of the hugely popular Baby Cake token. However, as a team, we thought what token would we all want to receive for FREE as a reward for hodling? The answer was unanimous: ETHEREUM COIN!

Why Ethereum Coin?

Ethereum is the coin that many crypto experts believe will be one of the best performers when the bull market returns. During the bear market the aim should always be to accumulate the tokens that will perform the best and what better way to do it then by just hodling a token! It allows OUR community to be the ones receiving one of the most valuable assets as a reward for investing and believing in our project.

Why create the token?

The Super Baby Ethereum team are meme-coin aficionados who for months during the bear market were diving deep in the sh!@ trying to enter the next coin to MOON! As anyone who has also done this knows, you end up being involved in rug after rug, bleeding our wallets dry. We thought how can we stop this and help people who were in these coins as well?

The answer: CREATING OUR OWN TOKEN.

The crypto world can be the wild west and having been involved with A LOT of cowboys in our time, we thought there needed to be a new sheriff in town to protect the people and allow them to make a **SAFE** investment.
